

# **RESINS** MADE BY CANDULOR

# CANDULOR.

We have understood  
prosthetics since 1936.

Denture base materials for  
full dentures, partial and hybrid  
dentures, as well as implant  
prosthetics.

## Pocket Portfolio

The CANDULOR Pocket Portfolio offers you  
a compact and clear overview of our denture  
base materials and their special features.

# XPLEX

 **Material**

High impact hot and self-curing polymer for denture bases

 **Property**

High fracture strength

 **Sizes**

Polymer (powder): 100 g, 500 g  
Monomer (liquid): 150 ml, 500 ml  
XPLEX Base (Disk): 98.5 – 30 mm<sup>1</sup>

<sup>1</sup>Presently only available in North America.

# XPLEX

## **Brief description**

The high-impact polymer is suitable for cold and hot polymerization. Due to its good flow properties, it is comfortable to work with and ensures an esthetic appearance with both low plaque adhesion and low tendency to discoloration.

## **Shades**

1, 3, 5, 34

## **Individualization shades**

53, 55, 57

## **Application**

Cold processing: pouring & packing technique  
Hot processing: packing technique

# AESTHETIC BLUE

-  **Material** Self-curing denture base material
-  **Property** Natural esthetics through 8 different shades
-  **Sizes** Polymer (powder): 100 g, 500 g  
Monomer (liquid): 150 ml, 500 ml

# AESTHETIC BLUE

## **Brief description**

The self-curing resin consists of a selection of high quality raw materials. They form the basis for the good physical properties of the products. The special pigmentation and the large color spectrum provide the natural pink of the artificial gingiva.

## **Shades**

0, 1, 3, 5, 34

## **Individualization shades**

53, 55, 57

## **Application**

Cold processing: pouring & packing technique

# AESTHETIC RED

- |  |  |
|--|--|
|  <b>Material</b> | Hot curing denture base material                                   |
|  <b>Property</b> | Outstanding fit and broad color spectrum                           |
|  <b>Sizes</b>    | Polymer (powder): 100 g, 500 g<br>Monomer (liquid): 150 ml, 500 ml |

# AESTHETIC RED

## **Brief description**

The low polymerization shrinkage of AESTHETIC RED ensures a high accuracy of fit. A broad range of shades can be used to simulate the natural perfection of the gingiva.

## **Shades**

0, 1, 3, 5, 34

## **Individualization shades**

53, 55, 57

## **Application**

Hot processing: packing technique

# AUTOPLAST

 **Material**

Self-curing denture base material

 **Property**

Good flow and modeling properties

 **Sizes**

Polymer (powder): 500 g

Monomer (liquid): 500 ml

# AUTOPLAST

## **Brief description**

This self-curing polymer is distinguished by its good flow properties. It is suitable for the pouring and flask pouring technique.

## **Shades**

5, 6, 34

## **Application**

Cold processing: pouring technique

# BASEPLAST

 <b>Material</b>	Hot curing denture base material
 <b>Property</b>	Easy processing
 <b>Sizes</b>	Polymer (powder): 500 g Monomer (liquid): 500 ml

# BASEPLAST

## **Brief description**

The hot-curing BASEPLAST polymer is characterized by simple and uncomplicated processing with a sufficiently long processing range.

## **Shades**

5, 6, 34

## **Application**

Hot processing: packing technique
